AUR30312 - Certificate III Automotive Electrical Technology

Automotive Electricians install, maintain and diagnose faults, and repair electrical wiring and computer-based equipment in cars, trucks, caravans, trailers, earthmoving and agricultural equipment and boats.

Specifically, they diagnose, service and repair faults on electronically controlled vehicle systems such as electronic fuel injection and ignition, anti-lock braking, cruise control and automatic transmissions. In addition, they test, replace, recondition and install equipment such as generators, alternators, starter motors and batteries. They also repair or replace faulty ignitions, electrical wiring, fuses, lamps and switches and use specialised electrical tools and machines.

Fees and Charges
In most cases the Queensland Government meets the cost of training. This means that neither the employer nor the trainee pay for the training component of the Traineeship. However, there is a Government requirement for all learners to pay a minimal contribution fee determined by the Government.

Course Length
The nominal duration to complete this competency based apprenticeship is 4 years full time. This duration is proportionately increased for part-time and school-based arrangements. The MTA Institute’s flexible training model takes into account the learner’s skills and knowledge acquired through previous training and experience. This may lead to a reduction in the time required to complete this apprenticeship.

Incentives
An employer of an apprentice may be eligible for Commonwealth incentives. For further information contact Australian Apprenticeship Pathways on 1800 338 022 or go to their website www.aapathways.com.au

Enrol
For further information contact one of our friendly team members using the contact details below.

Course Commencement
Commencement usually occurs within 28 days of enrolment.
